

How to Care for your Staghorn Fern

- Light: Hang in a spot with bright, indirect light.
- Water: Water when the moss ball feels **very hard and dry**. (On average, water once every two weeks in winter and 1 – 2 weeks in summer) Staghorns are epiphytes, so they like to dry out and do not do well in constantly wet environments.
- How to Water: Place the moss ball under a slow-running tap and allow it to **fully absorb water** for 5–10 minutes. Remove and hold vertically so excess water can drip off completely. Rehang after dripping stops

If you have any questions, feel free to message us on Etsy or Instagram. Thank you so much for purchasing from our store!

We're always happy to help and want you to truly enjoy your plant!
